# Acknowledgements

First and foremost I would like to express my gratitude to my supervisors.

Daniel, thank you for giving me the opportunity to do a PhD here. During these years I have learned a lot from you and have enjoyed my time working under your guidance. Thank you so much for all the encouragement and support you gave me. I feel very fortunate that I have a supervisor, who is the type of researcher I wish to become one day.

Aernout, thank you for all the useful advice you gave me throughout my PhD. You always took the time to carefully read my manuscripts and gave helpful comments. I have contributed a lot from your knowledge and experience.

I would like to thank the members of the assessment committee, Prof. dr. T. Müller, Prof. dr. T. Mountford and Prof. dr. J. van den Berg for the time they invested in reading this manuscript.

I am grateful for Bernardo de Lima for the collaboration that resulted in Chapter 3 of this thesis.

I wish to thank Bálint Vető for his guidance during my master's studies and for paying close attention to my work ever since. I am also grateful to Balázs Ráth for recommending me to apply for this PhD position.

It is my pleasure to thank all my colleagues and friends from the Bernoulliborg. In particular, I would like to thank Gabriel, Ben and Markus for all the great time we had together. Our birthday trips are among my favourite memories, I hope we will keep up this wonderful tradition. Gabriel, thank you for your constant support and encouragement in the period leading up to the defence. Ben and Markus, thank you for agreeing to be my paranymphs.

I would like to thank all my officemates, Nikolay, Matthijs and Pan Li for making our office an enjoyable place to work. Special thanks to Matthijs for translating the summary of this thesis into Dutch, and to Nikolay for providing the template of this thesis (among many other templates during the years). Further I would like to thank Bohuan, Caio, Eric, Georg, Jian, Lorenzo, Lucas, Mahdi, Pedro, Siamak, Teun, Vladimír and Yongyiao for the game nights, dinners and other activities that made these four years a wonderful experience.

I am especially grateful for my Hungarian friends in Groningen, who helped me feel like home far away from home. Kriszta, thank you for always being there through my ups and downs and for all the fun we had. Móni, thank you for

welcoming me in Groningen and helping me find my way around. Orsi, thank you for the endless game nights that made me fall in love with board games again.

I am immensely thankful to Balázs, who has been there from the very first steps I took to becoming a mathematician, always supporting me and never holding me back.

My biggest personal gratitude is to my family, especially to my mother, brother and sister. My decision to leave Hungary had a huge impact on their lives, yet they supported me without condition. Without them I wouldn't be where I am today.
